2D X-mas tree

The 2D Christmas tree is a modern, interpretation of the classic tree. While you can keep the tradition of decorating it yourself or with your family, it has some practical advantages over its predecessor. It does not lose its needles, it fits even in the smallest of rooms and it is re-useable for years!

A true canvas for decoration and creating a Christmas atmosphere, it can house traditional baubles and ornaments, as well as cards or decorative birds and butterflies. The two models are both made of braided wire on a steel frame, the gold one in a flower pattern, the silver one in a random pattern.
